Maquoketa River

Species: Deer, Turkey, Small game,
Furbearers

Open to hunting and trapping
according to DNR seasons with
County restrictions

Dundee Wildlife Area is located adjacent to the west side of Dundee in section 28 of Richland Township (T90N-R6W) Delaware County, Iowa. The 20.0 acre area is on the west edge of the town of Dundee.

Delaware County Conservation Board purchased this area in 1961 as a place for the public to use for fishing, wildlife habitat and outdoor enjoyment.

The Maquoketa River flows through this property in a north to south direction. As a result, it is subject to flooding in high water events. The river bottom is a wooded tract consisting of:

- Cottonwood
- Walnut
- Oak
- Ash
- Silver Maple
- River Birch
- Willow
- Elm

An abundance of wildlife can be found on this area such as:

- Deer
- Wild turkey
- Squirrel
- Rabbits
- Raccoon
- Fur bearers

Waterfowl such as wood ducks can also be found on the river and its back waters.

A rock ledge or riffle area served as a stream ford for crossing the river before any bridges were built. This along with log jams and wood debris in the river provides excellent habitat in the stream for a variety of fish species such as:

- Catfish
- Bass
- Carp
- Suckers
- Crappie
- Sunfish

Dundee Wildlife Area has a water access for canoers and kayakers. This makes for a very scenic trip starting 3 miles upstream at Backbone State Park to the Dundee Access. For the more adventurous, you can enter the river here and float to the Quaker Mill Dam Area which is 9.5 miles downstream.

The Dundee Wildlife Area remains in a natural state and provides a unique opportunity for outdoor recreation.
